MaUsE Macintosh Users East

RAM Upgrade At August Meeting

This month's meeting features a demonstration of what is involved in upgrading the RAM (Random Access Memory) of a standard Macintosh Plus from 1 Megabyte to 4 Megabytes.

With the recent release of System 7.0 for Macintosh, many owners are now realize that this is inevitable. The Apple literature indicates that 2 Megabytes of RAM is the minimum amount required to run System 7.0 but just about everyone feels that 4 Meg is where one really starts to see not only the benefits of System 7 but the power of the new applications designed specifically for System 7.

Our resident technophiles, John Field and Bruce Cameron, will be bringing all the goodies necessary to demonstrate what is involved and will be available to answer questions from members regarding costs, upgrade alternatives, and the oft asked "Upgrade or Replace" query.

Since Bruce and John will have all the necessary equipment with them, they have graciously agreed to also handle the installation for any members who have purchased the RAM chips and want to bring their Mac to the meeting.

See you Wednesday, August 28, at 7:30 PM in Brooklin.

Welcome DRAUG Veterans!

Our sister Apple User Group, DRAUG (Durham Region Apple Users Group) recently terminated its operations after many years of serving the needs of Apple II computer users in the area.

Over the years, DRAUG and MaUsE cooperated in a number of areas, including sharing in the cost of the BBS, teaming up for computer show displays, and occasionally holding combined membership meetings.

Out of respect for those DRAUG members who came before us, and in

gratitude for the offer to turn over the BBS to MaUsE, the membership of MaUsE has voted to extend a complimentary 1-year membership in MaUsE to all DRAUG members in good standing at the time of its termination of activities.

While we recognize the divergent equipment focus of Apple II vs. Mac owners, we hope to see and hear from former DRAUG members over the coming year.

Please join your Executive in extending a warm "Welcome!" to all DRAUG members.

MaUsE Mailbox

Each month, MaUsE receives many items of mail from Apple, other Mac Users' Groups, and third party sources. Much of this material is given to our club Librarian, Bruce Cameron, who in turn can make it available to MaUsE members.

Here's a summary of August's mail:

- Literature on a new service which can turn signatures into Postscript font...one key and your documents contain signatures.
- System 7.0 manuals from Apple;
- System 7.0 Product Introduction CD-ROM disk;
- National Capital Macintosh Club newsletter;

- July/August QuickConnect newsletter;
- Gold Coast Mac newsletter;
- Macintosh vs. Windows 3.0 brochure;
- Performance Report: Macintosh vs IBM & Compaq;
- Various Macintosh Technical Notes;and
- Upgrades & Updates Chart (5 copies).

All of this material will be available for members to borrow at the August meeting. In addition, we'll have some old computer magazines that we want to dispose of for good. Anyone who has similar materials is welcome to drop them off at any meeting.

This Month's Shareware Disk

The August shareware disk contains several items which were specifically requested by members at last month's meeting.

Space does not permit us to provide a detailed explanation of all of this month's items here but we always take a few minutes at each meeting to describe them.

Bruce Cameron, our resident Librarian, has recently updated the list of our entire library of software and will have copies available at the upcoming meeting.

SpaceMaker™ Reclaims Hard Disk Space

Aladdin announces new entry-level compression product designed to save disk space

Watsonville, CA — August 6, 1991 — Aladdin Systems, Inc. today announced a new compression product: **Stuffit SpaceMaker™**. The **SpaceMaker** system extension was designed specifically for saving disk space on-the-fly in a high speed, transparent fashion. **SpaceMaker** also introduces Idle-Time Compression, a revolutionary way to reclaim disk space over time.

With a retail price of \$59.95, **Stuffit SpaceMaker** will also be bundled into every package of the 3.0 version of **Stuffit Deluxe™**. This bundling makes **Stuffit Deluxe** the only compression product that addresses the two uses of file compression: on-the-fly space savings and archiving.

The compression speeds of **SpaceMaker** are comparable to hardware-based compression boards with an average of 50% compression, with some files compressing down to 98% of their original size.

Each time a user attaches a preset 'keyword' to any file or folder, **SpaceMaker** quickly compresses the item. Since **SpaceMaker** works with all Macintosh applications, this can be done at the Finder or in any program as a document is being saved. For instance, renaming a document called "Letter" to "Small Letter" causes **SpaceMaker** to instantly compress the document. Once compressed, there's no need to change the way a user works with the computer; when a file is used it is transparently expanded and when the user is done, the file is automatically recompressed. Document and application icons never change.

SpaceMaker introduces Idle-Time Compression — true background compression that works when the Macintosh is idle. With this unique feature, **SpaceMaker** can automatically compress any file that hasn't been modified for a specified period of time (two weeks, six months, etc.). Like a screen saver, Idle-Time

Compression causes **SpaceMaker** to appear after a user-specified time period and compress files that have become dated. With Idle-Time Compression, a user can walk away from the Macintosh and return to find additional megabytes of disk space available. As a flexible option, users can specify individual disks, files or folders that will never be compressed with CruiseControl or turn off this feature entirely.

Additionally, **SpaceMaker** can instantly create true **Stuffit Deluxe** archives and self-extracting archives by simply attaching a ".sit" or ".sea" keyword to a file or folder. These files will be combined into a single **Stuffit** archive that can then be transmitted via modem or network. By removing the ".sit" extension from any **Stuffit** archive, the contents of the archive are immediately UnStuffed. **Stuffit** files are the de facto standard on major online services including America Online, CompuServe, GEnie, and others.

Unlike other on-the-fly compression products, **SpaceMaker** automatically works with disk utilities (such as On Technology's OnLocation™), virus (such as SAM or Microcom's Virex™), and backup software packages. **SpaceMaker** is also very safe to use as it employs methods to guarantee data integrity — even in the event of a power failure.

The **SpaceMaker** package includes Aladdin's **Stuffit Engine™**. The **Stuffit Engine** allows developers to utilize the popular **Stuffit** compression and archiving features within their own products. Users of **SpaceMaker** will find FreeSoft's

White Knight™ and Software Venture's Microphone II telecommunications software will **Stuff** and **UnStuff** archives within the respective packages. Users of CE Software's **QuickKeys 2** can immediately **Stuff** or **UnStuff** using the **QuickKeys** software in conjunction with the **Stuffit Engine**.

David Schargel, President of Aladdin Systems, Inc., "We are happy to be able to offer **SpaceMaker** to our users as a new, affordable, and extremely easy means of maximizing hard disk space while providing **Stuffit** compatibility. We designed and priced **SpaceMaker** as the must-have Macintosh utility for the 90's." David added "With its lightning fast speed and CruiseControl feature, **SpaceMaker** will establish a new standard for saving disk space."

With the intent of shipping **SpaceMaker** with zero defects, Aladdin is not prepared to announce a release date at this time. When it ships, **SpaceMaker** will be available through the standard Aladdin distribution network.

Aladdin Systems Inc., founded in 1988, provides the industry-standard **Stuffit** family of products that comprise a series of best-sellers with over 300,000 users worldwide. For a number of months, **Stuffit Deluxe** held a top 5 position on the Merisel/MacAmerica Hot List for the entire utility market, making it the #1 selling compression product. **Stuffit Classic**, **Stuffit Deluxe**, and **Shortcut** have all received the coveted 5-mice award from MacUser Magazine and the product's author, Raymond Lau, was the first recipient of the prestigious Derek Van Alstyne Rising Star Award. Even Guy Kawasaki acknowledged that "Everyone in the Macintosh Cult uses **Stuffit**." And he's right.

MacWorld Boston: Latest Mac Products Released!!!

APPLE SAYS SYSTEM 7 UPGRADE WELL ON TRACK

BOSTON, Aug 7, Reuter - Apple Computer Inc said about 20 pct of its U.S. customers upgraded to the System 7 operating system since its introduction last May and that the company was well on track to meet its goal of three mln users within 12 months.

"About 20 pct of the U.S. customer base has upgraded - that's about three-quarters of a million users today," Roger Heinen, Apple vice president and general manager of Macintosh Software Architecture division told a news conference.

"This month will probably go by one million users of System 7," he said. "Certainly in the next 12 months we will reach our goal of three million users" set at the May 13 unveiling.

"I can even predict that there will be a System 8 but I don't want to talk about that today," he said.

Apple earlier said 12 European language versions of System 7 will be available by early September and several are already shipping. He added that Chinese, Japanese and Korean localized versions currently under development should be ready for market early next year.

MICROSOFT ANNOUNCES RELEASE OF FLIGHT SIMULATOR

REDMOND, WA (AUG. 5) BUSINESS WIRE - Microsoft Corp. Monday announced the release of Microsoft Flight Simulator version 4.0 for the Apple Macintosh.

This new version of the classic flight simulation software runs in color or black and white on all Macintosh models greater than the Macintosh Plus.

"Flight Simulator users have eagerly anticipated this update - and they won't be disappointed," said Mike Maples, senior vice president of the applications division at Microsoft. "Flight Simulator version 4.0 offers rich graphics and the latest in flight simulation features. Apple's dramatic success with its low-priced

machines clearly demonstrates the opportunity for consumer Macintosh software, and we believe Flight Simulator will excite and challenge Macintosh flight enthusiasts of any level."

New Version Offers a Wealth of Features:

The new Flight Simulator boasts state-of-the-art, three-dimensional graphics on both color and black-and-white Macintosh computers. Users can choose from a fleet of aircraft, including Cessna 182, Lear Jet, Sopwith Camel and Schweizer 2-32 sailplane. Or, they can design and fly their own planes with the exclusive experimental aircraft designer. Users can tinker with both the appearance and aerodynamics of their aircraft and test them against the physical laws of flight.

The Flight Simulator world encompasses 100 million square miles, spanning most of North America. Desktop pilots can take off from or land at 125 different airports and explore detailed scenery and landmarks in Los Angeles, San Francisco, Seattle, Chicago and the Boston-New York corridor.

Multiple windows provide an on-screen map of the chosen flying route, a cockpit view, a look from the tower, or a view from the spot plane. Plus, on-screen flight instruction teaches everything from the basics to aerobatics.

Flight Simulator is also among the first applications to take advantage of Apple System 7, with Balloon Help and AppleEvent support.

ALDUS INTRODUCES LICENSE PACK AT MACWORLD ...

BOSTON (AUG. 6) PR NEWSWIRE - Aldus Corp. (NASDAQ: ALDC) today introduced Aldus License Pack at the Macworld high-technology expo. Comprising a license agreement and special registration materials, a License Pack gives the owner of a full retail version of an Aldus software product the right to make one copy of that product for use on another computer. License Pack is available in the United States and Canada only.

"We view License Pack as a convenient and economical way for customers to purchase certain Aldus products without incurring the cost of extra manuals and disks," said Aaron Howard, vice president of Aldus U.S.A.

Individual License Packs are available for Aldus FreeHand(R) and the Macintosh and Microsoft Windows versions of Aldus PageMaker(R) and Aldus Persuasion(R). Each pack contains a serialized Aldus Dedicated License Agreement, a registration card with a hologram seal, and an order form that entitles the purchaser to a manual for \$95 plus applicable tax.

"License Pack is tailored specifically to the small workgroup or department environment where multiple copies of Aldus FreeHand, PageMaker or Persuasion are required," Howard said. "Our introduction of the License Pack is a direct response to our corporate and government customers who require an easy and economical way to install a copy of their Aldus software on an additional computer." Howard added that Aldus may offer License Packs for its other products in the future.

PRICING AND AVAILABILITY

Aldus License Packs are priced 20 percent less than their full-system counterparts. The suggested retail price for the Aldus FreeHand license pack is \$475; PageMaker, \$635; Persuasion, \$395. License Packs are available in North America exclusively through Aldus resellers. Order forms for additional manuals will be redeemed directly through Aldus Customer Service. For more information on License Packs, customers can call Aldus Customer Service at 206-628-2320.

Aldus Corp. creates computer software that helps people throughout the world effectively communicate information and ideas. The company distributes its products through an international network of more than 16,000 dealers and distributors.

And Still More Good Stuff From Boston...

ALDUS CORP. OFFERS SPECIAL DEAL FOR NEW BUYERS OF PAGEMAKER

BOSTON (AUG. 6) PR NEWSWIRE - At the Macworld Expo high-technology trade show today, Aldus Corp. (NASDAQ: ALDC) announced a special offer in the United States and Canada: new purchasers of Aldus PageMaker(R) 4.01 for the Apple Macintosh will receive a coupon for a free copy of Aldus(R) PrePrint(TM) 1.5, a suggested retail value of \$495 (U.S.).

PageMaker 4.01 is the latest version of Aldus' best-selling desktop publishing program for the Macintosh. PrePrint 1.5 is the recently released update to the company's Macintosh software program for producing color separations of entire publications from the desktop.

"We are making this special offer in response to the needs of our customers who require a complete, yet affordable software solution that will take them from page layout and design through the color separation process," said Larry Spelhaug, vice president of marketing. "Used together, PrePrint 1.5 and PageMaker 4.01 form one of the most powerful integrated color publishing solutions on the desktop. Now, they are available together at one low price."

New PageMaker 4.01 shipments are being packaged with the coupon attached to the box. Aldus resellers will receive coupons for distribution with each PageMaker package in their existing inventories. The offer will be available with full-system PageMaker purchases only.

Customers can redeem the coupon by returning it, the user registration card, and a copy of their PageMaker sales receipt to Aldus Customer Service. The special offer will be available from August through December 1991. During this time, PrePrint 1.5 will also continue to be sold at its suggested retail price of \$495. The suggested retail price of PageMaker 4.01 is \$795. Customers can contact Aldus Customer Service at 206-628-2320 for more information.

Aldus Corp. creates computer software that helps people throughout the world effectively communicate information and ideas. In addition to PageMaker -- its flagship program -- and PrePrint, the company's product line includes Aldus Digital Darkroom(TM), Aldus FreeHand(R), Aldus Gallery Effects(TM), Aldus Personal Press(TM), Aldus Persuasion(R), Aldus SuperCard(R), Aldus SuperPaint(R), and Aldus Super 3D(TM).

CLARIS®

CLARISWORKS REDEFINES STANDARD FOR INTEGRATED MAC ...

SANTA CLARA, CA (JULY 29) PR NEWSWIRE - Claris Corp. today announced ClarisWorks, the revolutionary new integrated software for Macintosh personal computers that enables users to manage their work, rather than their software.

ClarisWorks is designed to be the perfect software solution for first-time buyers of desktop and portable Macintosh computers, in business and education, the company said.

ClarisWorks features a breakthrough in interface design, with seamlessly integrated "environments": robust word processing, graphics, spreadsheets, charting, database management and communications. Unlike existing integrated products, which force the user to move among different "modules," ClarisWorks lets users access tools and features from within a single document. This unique design allows more natural computing, so users can add text, graphics, calculations and charts to their documents at any time.

"With traditional integrated packages, users have had to sacrifice power and functionality as they switch back and forth between cumbersome modules to add charts, graphics or other elements to their

documents," said Robert Roblin, Claris vice president of marketing. "ClarisWorks sets a new standard for the next generation of integrated software by delivering feature-rich, powerful environments and a truly seamless interface that gives users the freedom to create their documents easily and without compromise."

ClarisWorks will be demonstrated for the first time publicly next week at MacWorld Expo in Boston (Claris booth No. 5420).

ClarisWorks features robust word processing, graphics, spreadsheet, charting, database management and communications environments that feature proven, superior interface design elements consistent with Claris dedicated applications including MacWrite Pro, MacDraw Pro, Claris Resolve and FileMaker Pro.

ClarisWorks users will enjoy unique growth-path advantages, since the user interface and environment are so consistent with those of other Claris products. For instance, users that develop needs for more sophisticated spreadsheet power will find that they already know how to use Claris Resolve. And since both products feature consistent menu commands and user interface, users will be able to take advantage of their learning investment and be instantly productive. Similarly, users can painlessly upgrade to MacWrite Pro, MacDraw Pro and FileMaker Pro for more dedicated word processing, graphics and database management power, respectively.

ClarisWorks will ship in the United States during the fourth calendar quarter of 1991.

The suggested U.S. retail price for ClarisWorks is \$299. Current U.S. owners of Claris AppleWorks, Appleworks GS, Microsoft Works, Symantec GreatWorks, and RagTime can upgrade to ClarisWorks for \$99.

CONTACT: Renee Risch, 408-987-7534; Steve Ruddock, 408-987-7202; or Ines Anderson, 408-987-7154, all of Claris Corp.

Aldus SuperPaint 3.0 Debuts At MacWorld Expo...

BOSTON (AUG. 6) PR NEWswire - At Macworld Expo today, Aldus Corp. (NASDAQ: ALDC) introduced a major new release of Aldus SuperPaint(R), its integrated painting, drawing, and image-enhancement program for the Apple Macintosh. SuperPaint is developed by the company's subsidiary, Silicon Beach Software.

"Aldus SuperPaint 3.0 has been designed as the all-purpose graphics solution for both graphic artists and business users," said Steve Cullen, vice president and general manager, Silicon Beach Software. "The new version's approach to color and black and white, together with its overall versatility and functionality, will provide exceptional value for our customers."

Another key new feature is texture fills. Several are provided with the program, others can be created easily, and all can be applied as fills in both the paint and draw layers of the program. High-resolution paint and draw textures can be created directly in SuperPaint, or EPS textures can be placed from another program, such as Aldus FreeHand(R) and used within SuperPaint. Either approach can be used to create magazine-quality textures that can be output at the printer's maximum resolution.

Gradients, another significant enhancement to SuperPaint, are gradual transitions from one color to another. They can be created in both the paint and draw layers. In a color document, up to 256 colors can be

ing and using the program, enhances productivity, and gives our customers true flexibility in the way they work."

PRICING AND AVAILABILITY

Aldus SuperPaint 3.0 will be available in the third quarter of 1991 at a suggested retail price of \$199 (U.S.) Registered owners of SuperPaint will be mailed notification of the upgrade, priced at \$65 plus shipping and tax. For information, customers can contact Silicon Beach Software at 619-695-6956.

The system configuration for working in black-and-white is a Macintosh Plus, Classic, SE, Portable, SE/30, LC, or II series, with 2MB of RAM, System 6.0.5 or later, a hard disk, and one 800K drive. Color documents require a Macintosh

SUPERPAINT

New features in version 3.0 provide solutions for both black-and-white and color users with the addition of support for 1-, 8-, 16-, and 32-bit documents. This will offer photo-realistic technology to the SuperPaint user, according to Cindy Taylor, product marketing manager. "Customers working with 8-bit systems, for example, will be able to have quick access to nearly 16.8 million colors without requiring a 24-bit board," she said.

In addition, SuperPaint users will no longer need to purchase a separate program to fulfill their imaging needs. "SuperPaint's new image-enhancement capabilities have been seamlessly integrated into the program," Taylor said. These features include brightness and contrast, color balance, masking, smudge, diffuse, lighten, darken and invert.

used in a single gradient. A palette of nearly 16.8 million true and "dithered" colors offers the ability to specify the direction and type of the gradient fill. Users can also create PostScript-language gradients in the draw layer for detailed, high-resolution output. All fills (including patterns with colors, textures and gradients) can be applied with any tool that uses fills. This integration allows the user to concentrate on the creative process rather than tool-specific constraints.

Hot keys, a new feature that lets users quickly access tools and palettes with a single key, is particularly useful when working on small monitors, multiple monitors, or in full-screen mode. "The new, simplified interface makes SuperPaint easier to learn, and the quick access to tools and palettes through hot keys makes it even easier to use," Taylor said. "This bridges the gap between learn-

SE/30, LC, or II series, 2MB of RAM, and 32-bit QuickDraw, System 6.0.5 or later, a hard disk, and one 800K drive.

Aldus Corp. creates computer software that helps people throughout the world effectively communicate information and ideas. In addition to Aldus SuperPaint and Aldus FreeHand, the company's product line includes Aldus PageMaker(R) - its flagship program -- as well as Aldus(R) Digital Darkroom(TM), Aldus(R) Gallery Effects(TM), Aldus(R) Personal Press(TM), Aldus Persuasion(R), Aldus(R) Pre-Print(TM), Aldus SuperCard(R) and Aldus(R) Super 3D(TM). The company distributes its products through an international network of more than 16,000 dealers and distributors.

MaUsE NEWS

• **O**ur last Executive meeting included member Hugh Amos who stopped in for a copy of Disinfectant 2.5.1 (which just happens to be included on this month's shareware disk) and a coffee and stayed for the meeting.

We enjoyed Hugh's company and input and were pleased that he has expressed an interest in helping out with the membership record keeping function.

Remember, ALL members are more than welcome to participate in the running of MaUsE and coming out for an Executive meeting is a good way to start.

• **I**n the mail this month came advance registration information for the upcoming MacWorld Expo in Toronto. This will be the second year for the event in Toronto. If you missed it for any reason last year, be

sure to make it in 1991. The dates are October 8 through 10, 1991 at the Better Living Centre inside the Canadian National Exhibition grounds.

Admission to MacWorld Expo can be obtained either as a pass for just the exhibit area or as a pass which also includes all of the conferences. The exhibit only pass is \$18 by advance registration (\$30 at the door) while the conference pass is \$80 (\$95 at the door). The latter may seem steep, but remember that this is a full 3 day event and there are about 36 conferences spread over the event.

We will have copies of the pre-registration form available at the August meeting for interested members.

• **W**e are looking for a MaUsE member interested in becoming a System Operator for the BBS. The

BBS is currently being run from the home of a DRAUG member but this is a temporary arrangement pending finding a new home for the computer and related equipment. MaUsE will cover the costs of installing a separate telephone line. If you are interested, please let any of the Executive know at the August meeting.

• **A**lso needed is input on meeting topics for the balance of '91 and for 1992. We would like to see a few members offer to put on presentations or, alternatively, to take on the job of organizing a meeting program. This is another way in which you can participate in MaUsE and at the same time ensure that our meetings meet YOUR needs.

• **F**inally, remember that your membership entitles you to place classified ads in Double-Click at no charge. Just bring the text to the Editor at the next meeting.
